The visualizations in this document are heavily indebted to Edward Tufte and his use of sparklines—small, clutter-free time series lines—to show how many different panels or categories of data are changing through time; check out [https://www.edwardtufte.com/bboard/q-and-a-fetch-msg?msg\\_id=0001OR](https://www.edwardtufte.com/bboard/q-and-a-fetch-msg?msg_id=0001OR).

## Worldwide

### Worldwide Summary

Sorted by total number of cases. Percent growth in total cases in the past seven days is last column.

Table 1: Worldwide Summary

Country_Region	days_50	conf	deaths	new_conf	conf_lag7	l7_rate
US	34	121478	2026	19821	25493	376%

## Ln (Seven-Day-Moving-Average New Cases) Impact on Ln (New Cases)

In other words, elasticity. How does this elasticity change through time, from days since the 50th case?

An elasticity under 1 indicates that over a seven-day period, new cases are decreasing.

The black line shows the best curve fit for elasticity changing over time. All countries generally are moving to cap the rate of exponential growth. Countries above the line are doing worse than average, and those below the line are doing better than average. A rate below 1 indicates that new cases are declining over an average 7-day period.

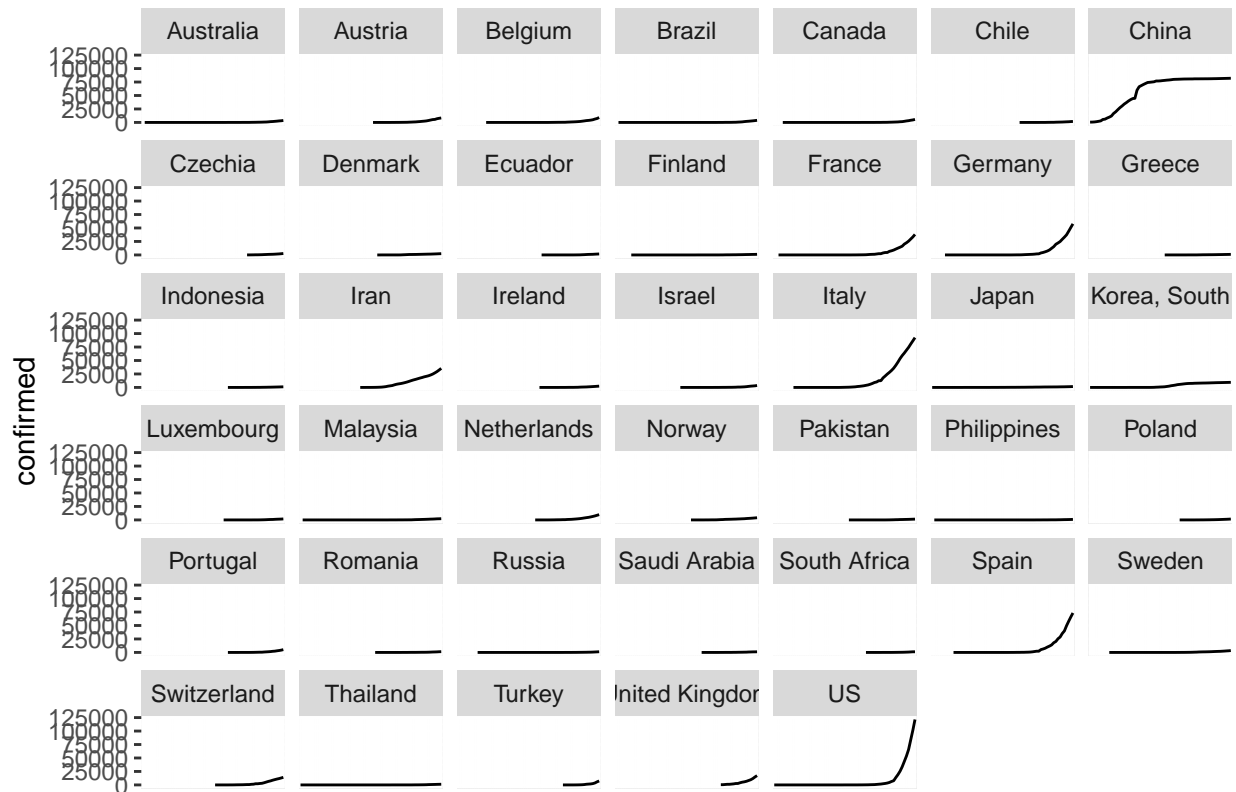

Table 2: Countries by Predicted vs. Actual Lag 7 New Case Elasticity on Today's Cases

country	days_since_50	lag_7_elasticity	prediction	residual
Turkey	11	1.15	1.12	0.03
Ecuador	12	1.10	1.12	-0.02
Pakistan	14	1.07	1.11	-0.04

US	12	120728	2016	19630	25273	376%

## Ln (Seven-Day-Moving-Average New Cases) Impact on Ln (New Cases)

In other words, elasticity. How does this elasticity change through time, from days since the 50th case?

An elasticity under 1 indicates that over a seven-day period, new cases are decreasing.

The black line is the best fit for elasticity for the states that have had 50 cases as they progress. Above the line: worse than average; below-the-line: better than average.

The blue line is the best fit for elasticity for countries across the world. It's apparent that the U.S. is not doing as well as the rest of the world in containing exponential growth—probably due to initial testing failures.

### Comparisons with U.S. and worldwide averages

Some states are doing better than worldwide averages when taking into account days since 50th case. Most are doing worse.

Table 4: States by Predicted vs. Actual Lag 7 New Case Elasticity on Today's Cases

state	days_since_50	lag_7_elasticity	prediction_us	prediction_ww	us_residual	ww_residual
Puerto Rico	4	1.24	1.22	1.19	0.03	0.05
Montana	5	1.24	1.20	1.18	0.04	0.06

## Forecast New Cases by State

We estimate new cases by date, to see when states will peak, based on the worldwide curve fit. The reasoning is that testing rates increasing wildly recently in the U.S. have falsely inflated elasticity.

Table 5: Forecast Peak New Cases by State

state	total_cases	peak_new_cases	date	population	perc_pop_infected
Colorado	6,147	409	2020-03-26	5,268,367	0.1%
Maine	1,773	43	2020-03-28	1,328,302	0.1%
New Jersey	1,107,096	62,913	2020-04-14	8,899,339	12.4%
New York	1,554,748	67,757	2020-04-14	19,651,127	7.9%
Indiana	1,181,686	87,983	2020-04-18	6,570,902	18.0%
Washington	45,311	934	2020-04-18	6,971,406	0.6%
Massachusetts	732,918	34,931	2020-04-20	6,692,824	11.0%
Connecticut	415,467	19,903	2020-04-22	3,596,080	11.6%
Illinois	97,354	2,288	2020-04-22	12,882,135	0.8%
Pennsylvania	1,594,434	89,652	2020-04-22	12,773,801	12.5%
Michigan	718,754	28,651	2020-04-23	9,895,622	7.3%
Arkansas	8,896	164	2020-04-24	2,959,373	0.3%
Louisiana	252,854	8,150	2020-04-24	4,625,470	5.5%
Maryland	766,512	41,061	2020-04-25	5,928,814	12.9%
Minnesota	9,791	171	2020-04-25	5,420,380	0.2%

state	total_cases	peak_new_cases	date	population	perc_pop_infected
